## COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

## EXAM OVERVIEW

In this module, the student delved into DOM manipulation and event control with JavaScript, understanding how to interact dynamically with the elements of a web page. They learned to create, modify, and remove HTML elements, as well as capture and handle user events, such as clicks and form submissions. They also explored the manipulation of styles and attributes via code, integrating HTML, CSS, and JavaScript in a practical way. Through projects and exercises — such as Calc.js and Tic-Tac-Toe — the student consolidated their skills in interactivity, logic, and data storage in the browser, achieving a solid mastery of the dynamic functioning of web applications.
