## COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

## EXAM OVERVIEW

In this module, the student delved into the universe of TypeScript, understanding why this language is a powerful evolution of JavaScript for modern development. They learned about static typing, type inference, and the main features that make the code safer, more readable, and scalable. They explored primitive types, tuples, enums, and techniques for creating custom types and interfaces, as well as becoming familiar with utilities like Omit and Pick. The content also covered modules, object-oriented concepts, and advanced features such as generics and decorators, enabling the student to structure complex applications with robustness and clarity.
