75% points required

COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

EXAM OVERVIEW

In this module, the student learned to create modern and responsive interfaces using Bootstrap and Sass, mastering everything from the installation of the framework to its advanced customization. They understood the use of utility classes and ready-made components from Bootstrap, integrating them into workflows with CDN, Webpack, and Vite. Next, they explored the fundamentals of the Sass preprocessor, understanding how variables, mixins, and nesting make CSS more efficient and modular. Finally, they applied this knowledge to customize Bootstrap and build professional layouts with the responsive grid system, consolidating essential skills for modern front-end development.
