MINIMUM SCORE

75% points required

COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

EXAM OVERVIEW

In this module, the student explored the modern features of JavaScript introduced by the latest versions of ECMAScript, such as template literals, arrow functions, destructuring, spread, rest, and advanced operators. They learned to organize code with modules (CommonJS and ES Modules) and to manage dependencies and scripts with npm, also utilizing external libraries like dayjs. Furthermore, they understood how to transpile and bundle projects with Babel and Webpack, mastering the modern development workflow of JavaScript applications. Through practical exercises and structured projects, they consolidated their ability to write cleaner, modular code that is compatible with different environments.
