COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

EXAM OVERVIEW

In this module, the student delved into the fundamentals of CSS3, learning to style web pages and transform simple structures into complete and professional visual interfaces. Concepts such as colors, fonts, margins, spacing, selectors, and variables were explored, along with inheritance and specificity, which are essential for well-organized code. Through the study of the Box Model and measurement units, the student understood how CSS controls the layout and behavior of elements on the screen. The learning culminated in the practical construction of a complete website, consolidating the integration between HTML and CSS in an efficient and modern way.
