## COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

## EXAM OVERVIEW

In this module, the student learned to use Git and GitHub as essential tools for version control and collaborative work in software projects. They understood the basic workflow of Git, executing versioning commands, creating branches, resolving merge conflicts, and following best practices for commits. They also configured remote repositories, used SSH, explored the use of `.gitignore`, and learned to contribute to open-source projects. By the end, the student consolidated their ability to manage code in an organized, secure manner, integrated with development teams.
