75% points required

COURSE OVERVIEW

The Full Stack JavaScript Training transforms beginners into complete Full Stack JavaScript programmers, empowering them to work in the technology market with practical and up-to-date knowledge. Throughout the course, we cover everything from the fundamentals of programming to the development of web and mobile applications, using the most relevant technologies in the JavaScript ecosystem.

The course is divided into four main blocks: Fundamentals, Front-end, Back-end, and Projects, providing a progressive and integrated learning experience.

EXAM OVERVIEW

In this module, the student learned to integrate SQL databases with Node.js, starting with the use of native drivers and connection pools and advancing to Prisma ORM, understanding its operation, the structure of schema.prisma, and the creation of 1-n relationships. They developed queries with filters, pagination, and JOINs, and applied this knowledge in building a complete API with TypeScript and Prisma, covering data modeling, repository creation, implementation of business rules, and best practices for coupling and cohesion. Through challenges and guided projects, they consolidated their mastery of CRUD operations and scalable architecture for modern applications.
